The Nepal government has a history of forming unrealistic budgets and making last-minute changes, according to an Accountability Lab Nepal analysis. During the first nine months of the current fiscal year, the government made budget transfers worth NPR 370.40 billion, citing falling revenue collection as the reason. In April alone, the government made a cash transfer of NPR 33.21 billion to manage expenses.

According to the Ministry of Finance, the majority of the transfers, NPR 31.41 billion, which account for 19.2 percent of the total budget, are for various projects which were not part of the annual budget. Furthermore, the government allocated a significant amount for capital expenditure every year to build infrastructure projects, of which only around 70 percent is spent by the end of the year. However, the majority of these expenses are made during the end of the year to use the budget.

This indicates the hasty and unscientific budget making of the Nepal government. Budget transfers suggest irregularities which arranges 29,300 rides daily and generates an annual turnover of NPR 2.11 billion. This situation poses risks to passengers’ safety and data privacy, and also affects the government’s tax revenue.

In the last fiscal year 2021/22, the government made a budget transfer of NPR 33.21 billion to manage expenses. Additionally, 100 million was transferred for undisclosed purposes. This situation poses risks to passengers’ safety and data privacy, and also affects the government’s tax revenue.
